DECODING THE FUTURE

ACOS RSU

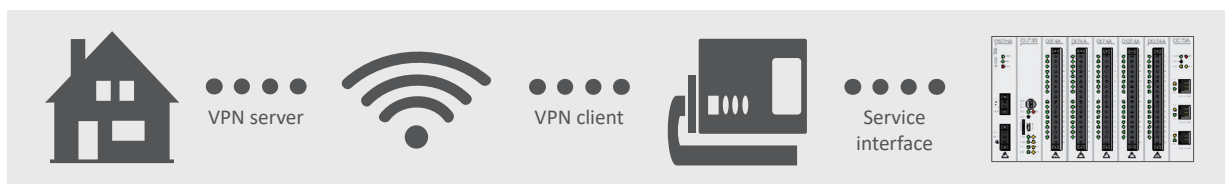

Secure remote diagnostics and maintenance for your telecontrol and automation technology

With **ACOS RSU**, we developed a simple but efficient product to improve and facilitate maintenance and service of your remote telecontrol systems. We provide you with a package that includes everything you need for secure and fast remote access to your **ACOS 7** devices. The best thing about it: you recoup your investment already with the first use of **ACOS RSU**.

Thanks to the remote help option, you save costs and time for costly field operations.

Stay on the safe side in compliance with legal requirements. Our simple and efficient integrated solutions creates flexibility.

Connect, start, go – this is how our solution works

ACOS RSG – Remote Service Gateway
A central maintenance computer located in Ettlingen, Germany, administers the secure communication connection.

Transmission via mobile service
The mobile service connection is encrypted (SIM card provided by the customer), secure and reliable.

ACOS RSU – Remote Service Unit
The remote service unit is located at your premises and connected to the local service interface of the VIVAVIS device if needed.

Telecontrol devices
Simply connect **ACOS RSU** to the service interface and start remote diagnostics or remote maintenance. Done!
