DECODING THE FUTURE

EP2000.alarm

The software EP2000.alarm offers secure remote alarm notification by means of phone trees, escalation matrices, on-call schedules and text-to-speech feature.

Brilliant clarity and improved transparent monitoring thanks to aggregated acknowledgements

With EP2000.alarm, we provide a future-proof and cost-effective application for the process control system EP2000 that is easy to configure.

Activation of integrated on-call schedules via stored call trees

Features

- Comfortable alarm editor
- Definable call trees with escalation levels
- Definable on-call schedules
- Configured alarm messages are read via telephone using premium text-to-speech technology – expensive announcement files are thus no longer required
- Economical notifications by means of text messages via the cloud – no mobile phone contract required
- Integrated cloud security – text or voice messages are only sent via outgoing connections and external access to the own network is thus not required
- Conventional text messages via GSM modem – mobile phone contract and sufficient signal strength required
- Voice messages with VoIP via the cloud or own telephone connection
- Email notification or Email-to-SMS
- Web-based alarm editor and alarm monitor available for all browser-enabled devices such as desktop computers, tablets or smartphones – no installation required
- Acknowledgement of call trees via alarm monitor or key code in case of voice call or response text messages via SMS
- Clearly structured alarm monitor for transparent surveillance of alarms
- Complete recording of notifications
