

## IDSpecto.enVIEW.CI

### Your portal to display energy data for districts, industrial as well as special contract customers

Being able to offer added values is ideal for meter operators to face competitors and our flexible web portal **IDSpecto.enVIEW.CI** is the perfect offering to your major customers. Developed for industrial as well as special contract customers, the portal enhances your portfolio and adds automated provision and visualization of topical energy and metered data. Be it data metered and delivered by AMR, smart metering systems or district submetering – with **IDSpecto.enVIEW.CI**, you are able to display data in your web appearance easily and in accordance with your demands. Your customers benefit from being up-to-date and remain loyal to your organization.

Offering customer portals as added value service is the perfect tool for energy companies and municipalities to bond customers. At the same time, this additional offer helps to differentiate from competitors such as nationwide energy suppliers or meter operators. **IDSpecto.enVIEW.CI** combined with **IDSpecto.enVIEW.Portal** – this is our comprehensive package for all customer groups within the supply and metering grid areas. **IDSpecto.enVIEW.CI** provides completely up-to-date metered data from the metering information platform **IDSpecto.DAYOS** to your customers or even to your sales staff. Furthermore, the latter may use the portal to offer additional services such as, for example, energy counselling.

### In detail

- Flexible internet portal
- Provision of metered and energy data in line with demand
- Clear visualization of all mediums
- Reliable access to up-to-date metered data
- Extensive support for device technology, eg common meters, smart meters, smart metering systems and other meters for gas, electricity or water
- Data visualization also available for sensors used in, for example, submetering or districts
- Intelligent data transmission via email with customizable metered data subscriptions
- Easy to use modular enhancement of your GÖRLITZ or VIVAVIS system
- Customizable to your corporate identity (CI)
- Additional consulting services available

### Easy provision of measured values

Using **IDSpecto.enVIEW.CI**, you can unlock any kind of metered data as well as calculated or derived registers and time series (load profiles and meter reading sequences) to the respective portal user.

The separate administration interface supports centralized organization of portal users and their access to data. This way you are able to provide any date in line with demand and in accordance with rules and regulations.

As soon as data has been unlocked, your customers are allowed to examine and compare data in the portal. Customers may also export data for further electronic processing. The portal thereby securely retrieves up-to-date information from **IDSpecto.DAYOS** via the portal's interface and prepares this information for visualization. Besides measured values for all mediums, automated aggregation as well as visualization of generation, consumption and maxima promote comprehension. The portal also considers the peculiarities of the Gas medium and thus enables comparison with other mediums.

### Usage in districts

**IDSpecto.enVIEW.CI** uses the database of **IDSpecto.DAYOS** and thus easily enables visualization of data provided by sensors in districts. Thanks to an open and flexible approach, the software is able to capture all kinds of values measured by any sensor and provide them with **IDSpecto.enVIEW.CI**. This way you may monitor smoke detectors, heat cost allocators, sensors indicating levels of garbage bins or even humidity and climate sensors to plan and implement well-directed measures. Other use cases might be realized too, such as, for example, visualization in tenant electricity models for administration and tenants.

### Sending automated emails

Our portal offers your customers the opportunity to receive all required information comfortably via email. They simply have to configure their user accounts and individually select information they want to receive at a given time. Your customers are also able to further maintain and control their subscriptions independently via their accounts. This means you as provider must not expend any effort and workload of your service staff is reduced.

### Integration into your system landscape

Thanks to integration into your existing **IDSpecto** platform, the web portal is able to use default interfaces to exchange master data as well as metered data. The portal uses data already available in your system. Thus, laborious configuration is not required. This reduces time needed for realization within projects.

### Customizable design

Thanks to its flexible concept, you can easily adapt **IDSpecto.enVIEW.CI** to your corporate design and implement your logo, your corporate colours and the like. This maximizes recognition and increases familiarity. Of course, your customers never recognize the **VIVAVIS** system behind.

### Additional services

Furthermore, the portal enables additional services such as energy or tariff consulting. Your sales staff may use the portal when meeting customers as reference, for visualization or to present attractive offers.

Especially the combination with **IDSpecto.enVIEW.Portal** – our portal for domestic customers – is very appealing and an economic choice, as both portals have the same requirements. Thus, you can operate them together on the same installation and hardware basis. This way you benefit from a flexible integrated solution suitable for all customer groups – residential, industrial as well as business customers – and minimize operating costs at the same time.
